

Introduction to Cybersecurity: Workshop and Response Exercises

Lander, WY – September 18, 2018

Cybersecurity threats are real and they are here to stay. For example, a recent [alert](#) was issued that provides information on foreign government actions targeting multiple critical infrastructure sector control systems, including the water sector. So what can be done about this threat?

To help answer that question, the U.S. EPA is sponsoring a **free, one-day workshop with response exercises** to inform water utilities about the cyber threat, ways to manage the threat, and tools (such as AWWA's cybersecurity tool) available to help utilities. In addition, current results from several Virginia waterworks cyber assessments will be presented to share lessons learned.

In the afternoon, two facilitated response exercises will be conducted presenting realistic cyber threat scenarios, allowing all participants to talk through the actions they would take in response to the threats. The goal is to identify general planning or procedural actions that enhance cybersecurity and mitigate risk.

This workshop is intended for utility information technology staff and utility managers. For questions regarding registration, please call the WARWS office at 307-436-8636 or email warws@warws.com.

The workshop in Lander, Wyoming will be held on Tuesday, September 18, 2018, 8:00 am—5:00 pm at:
Lander Community Center
950 Buena Vista Drive
Lander, WY 82520
