

Tabletop Exercise Tool for Drinking and Wastewater Utilities

EPA has just updated their Tabletop Exercise (TTX) tool for drinking and wastewater utilities. The TTX tool provides users with the resources to plan, conduct and evaluate tabletop exercises. This 2018 version of the TTX tool contains 12 customizable all-hazards scenarios (e.g., natural disasters, man-made incidents) that will assist utilities to practice, test and help improve emergency response plans and procedures.

You can download the TTX tool
